Subject Index to Volumes 53–59, 1993

Adaptive Algebraic Multigrid for Multigroup Neutron Diffusion Reactor Core Calculations, 53:13

Aeromedical Fleet Expansion, Multicriteria Analysis of, 54:101

AI, A New Computational Search Technique for, Based on the Cantor Set, 57:255

Appel Polynomials, Probability Measures, and Polynomial Approximation, 53:277

Assignment of Available Products to Orders with the MCDM Software ORESTE, 54:183

Asymptotic Properties of (r, s)-Directed Divergences in a Stratified Sampling, 55:131

Autonomous Higher Order ODEs, Some Extrapolation Methods for Solving, Existence of h^2 Expansion for, 58:69

Banach Spaces, A Note on the Halley Method in, 58:215

Bessel's Differential Equation, A Technique for Developing Complete Orthonormal Basis Sets Using General Solutions of, 55:255

Biasing Parameter Computational Techniques in Ridge-Type Estimation, Comparison of, 53:111

Bicriterion Operation of a Water Resources System with Reliability-Based Tradeoffs, 54:197

Biological Autonomy: The Self-Creation of Constraints, 56:177

Biology, A Vehicle for Founding Physics on, Rather than the Other Way Around; Being Free from Ceteris Paribus, 56:261

Biophysicalism, 56:103

Boolean Logic, A Massive Parallel Computation in; 57:113

Boundary Conditions in Decomposition Solutions, A New Algorithm for Matching, 58:61

Boundary Value Problems, a Class of Two-Point, On the Stability of a Classical Second Order Method for Solving, 59:247

Boussinesq-Type Equation, A Highly Accurate Finite-Difference Scheme for a, 55:201

Buoyancy-Induced Flows, A Chebyshev Spectral Collocation Method for the Computation of, 55:297

Cantor Set, A New Computational Search Technique for AI Based on the, 57:255

Cauchy Singular Integral Equation, Reduction of, to Fredholm Equation in $\mathbf{L}_p$, A Note on, 56:97

Cellular Automata, Implantation of, 55:49

Cerebellar Granule Cells, Mathematical Model of Potential Spreading Along Neuron Dendrites of, 59:73

Ceteris Paribus, Being Free from: A Vehicle for Founding Physics on Biology Rather than the Other Way Around, 56:261

Chaos, Order, and Information in the Evolution of Strings, 56:131

Chaotic Solitons and the Foundations of Physics: A Potential Revolution, 56:289

Chebyshev Spectral Collocation Method for the Computation of Buoyancy-Induced Flows, 55:297

Classical Logistic Equation with Heredity, Some New Observations on, 58:275

Complex Variable Residue Theory, Exact Series Solution to the Epstein-Hubbell Generalized Elliptic Type Integral using, 53:173

Computational Techniques, Biasing Parameter, in Ridge-Type Estimation, Comparison of, 57:111

Constraints; Biological Autonomy: The Self-Creation of, 56:177

Control Functions Revisited, I; Elliptic Grid Generation System, 59:151

Convex Function, Global Minimum Point of a, 55:213

Cost Functions, Nonlinear Multiattribute, Routing with, 54:215

Cubic Spline Algorithm, A Compact, for Converging to Function Minimums, 567:29

Cubic Spline Methods, Third-Order Variable-Mesh, for Singularly Perturbed Boundary-Value Problems, 59:117

Darcy-Lapwood-Brinkman-Saffman Dusty Fluid Flow Models through Porous Media.
Part I: Models Development, 54:65

Part II: Applications to Flow into a Two-Dimensional Sink, 54:81
Decision Making, Multi-attribute: Dominance with Respect to an Importance Order of the Attributes, 54:167
Decision Making under Uncertainty, Managerial, Evaluation of the Accuracy of Naslund's Approximation for, 55:73
Decision Support System for Discrete Multiple-criteria Problems: Certainty, Uncertainty, and Hierarchical, 54:131
Decomposition Method, Application of, to the Solution of the Reaction-Convection-Diffusion Equation, 56:1
Decomposition Solutions, A New Algorithm for Matching Boundary Conditions in, 58:61
Divergences, (r, s)-Directed, in a Stratified Sampling, Asymptotic Properties of, 55:131
Domain Decomposition, Norm Estimates of Product Operators with Application to, 53:251
Domain Decomposition Problems, Spectral Multigrid Methods for, Using Patching Techniques, 59:165
Dynamical Models for Narrow Plate Motion, Formulation and Validation of, 58:103

Economic Evaluation and Prediction, A Mathematical Model and Computer Program of, 59:63
Electromagnetic Fields in 2-D, Least Squares Finite Element Method for, 58:143
Elliptic Grid Generation System: Control Functions Revisited. I, 59:151
Elliptic Partial Differential Equations, MUDPACK-2: Multigrid Software for Approximating, 53:235
Endo Approach, 56:281
Epidemiological Model, An Accurate, 53:1
Epstein-Hubbell Generalized Elliptic Type Integral, Exact Series Solution to, using Complex Variable Residue Theory, 53:173
Erratum: Remarks on the Lower and Upper Solutions Method for Second- and Third-Order Boundary Value Problems, 56:101
Expectations, Adaptive, On the Controllability of Discrete Dynamic Oligopolies under, 56:49
Exponential-Polynomial Approximation, Natural Exponential Families of Probability Distributions and, 59:275

Feedback Stabilizing Controller, Suboptimal, for Class of Nonlinear Regulator Problems, 59:1
Finite-Difference Scheme, A Highly Accurate, for a Boussinesq-Type Equation, 55:201
Finite Element Analysis of Magnetohydrodynamic Pipe Flow, 57:177
Finite Element Method. Least Squares, for Electromagnetic Fields in 2-D, 58:143
Finite Element Methods of Two Nonlinear Integro-Differential Equations, 58:241
Finite Element Preconditioning for Spectral Multigrid Methods, 59:19
Fluctuon Model of Force, Life, and Computation: A Constructive Analysis, 56:203
Food Industry, A Biattribute Quality Analysis of, 58:199
Formal Models of Measurement, Control, and Cognition, The Limitations of, 56:111
Fredholm Equation in $\mathbf{L}_p$, A Note on a Reduction of Cauchy Singular Integral Equation to, 56:97
Frobenius-Perron Operator, High Order Approximation of, 53:151

Gel'Fand-Levitan Equation, Approximate Solution to, 53:121
Generalized Airfoil Equation, The Discrete Sloan Iterate for, 57:103
Ginzburg-Landau Operator, the Discrete, Sweeping Algorithms for Inverting, 53:129
Global Minimum Point of a Convex Function, 55:213
Global Smoothing and Estimation, International Migration and Air Travel, 53:225
Goursat Problem, On the Numerical Solution of, 59:89

Halley Method in Banach Spaces, A note on, 58:215
Harmonic Gradient Estimator, Variance and Bias Reduction Techniques for, 55:153
Heredity, Classical Logistic Equation with, Some New Observations on, 58:275

Hilbert Spaces, Weak and Norm Convergence of a Parallel Projection Method in, 56:35
Homotopy Methods, Structure Variable, for Solving Nonlinear Systems, 59:177
Hyperbolic Equations with Functional Arguments, Oscillation of, 53:97
Hyperbolic Systems of First Order, The Riemann-Green Function and the Invariant Imbedding Equations for, 55:101
Hypergeometric Model for Capture–Recapture Experiments, Statistical Inference Procedure for a, 58:225

Integral Transforms, Logarithmically Singular, The Numerical Evaluation of a Class of, 57:117
International Migration and Air Travel: Global Smoothing and Estimation, 53:225
Invariant Imbedding Equations, The Riemann-Green Function and, for Hyperbolic Systems of First Order, 55:101
Inverse Calculation Technique for Quasi-Three-Dimensional Turbomachinery Cascades, 57:197
Inverse Problem, An, in Nonlinear Optics, 56:59
Iteration and Recursive Specifications, On the Naturality of the, 57:1

Jacobi and Related Polynomials, A Unified Presentation of Certain Operational Formulas for the, 57:77

Learning Processes Based on Incomplete Identification and Information Generation, 55:219
Least Squares Finite Element Method for Electromagnetic Fields in 2-D, 58:143
Life, Forms of: Unprogrammability Constitutes the Outside of a System and Its Autonomy, 57:19
Linear Differential Equations of Fractional Orders, 55:1
Linear Estimation Theory, Optimal Weighting of A Priori Statistics in, 57:221
Linear Finite Element Method, Non-Smooth Initial Data Error Estimates with Weight Norms for, of Parabolic Partial Differential Equations, 54:1
Living State, Toward a Theory of,
Part I, 56:153
Part II, 56:167

Magnetohydrodynamic Pipe Flow, Finite Element Analysis of, 57:177
Massive Parallel Computation in Boolean Logic, 57:131
Mathematical Model and Computer Program of Economic Evaluation and Prediction, 59:63
Mathematical Model of Potential Spreading Along Neuron Dendrites of Cerebellar Granule Cells, 59:73
Matrix Inversion, Real-Time, A Recurrent Neural Network for, 55:89
Measurement, Control, and Cognition, The Limitations of Formal Models of, 56:111
Model of Force, Life, and Computation, The Fluctuon: A Constructive Analysis, 56:203
Modeling, On Models and, 56:359
MUDPACK-2: Multigrid Software for Approximating Elliptic Partial Differential Equations on Uniform Grids with Any Resolution, 53:235
Multicriteria Analysis of Aeromedical Fleet Expansion, 54:101
Multicriterion Decision Making with Engineering Applications, Preface to Special Issue, 54:99
Multiple-Criteria Problems, Discrete, A Decision Support System for, 54:131
Multistep Matrix Methods, Numerical, for $y'' = f(t, Y)$, 59:257

Narrow Plate Motion, Formulation and Validation of Dynamical Models for, 58:103
Naslund's Approximation for Managerial Decision Making under Uncertainty, Evaluation of the Accuracy of, 55:73
Neural Network, A Recurrent, for Real-Time Matrix Inversion, 55:89
Neuron Dendrites of Cerebellar Granule Cells, Potential Spreading Along, 59:73
Neutron Diffusion Reactor Core Calculations, Multigroup, An Adaptive Algebraic Multigrid for, 53:13
Nonlinear Algebraic Equations, Finding Multiple Roots of, Using S-System Methodol-

ogy, 55:187
Nonlinear Differential Equations, Second-Order, Oscillation and Nonoscillation Criteria for, II, 59:101
Nonlinear Integro-Differential Equations, Two, Finite Element Methods of, 58:241
Nonlinear Multiattribute Cost Functions, Routing with, 54:215
Nonlinear Plate Model, Dynamic, Estimation of Material Parameters in, 54:25
Nonlinear Regression Models, General, Robust Estimation and Testing for, 58:85
Nonlinear Regulator Problems, A Suboptimal Feedback Stabilizing Controller for a Class of, 59:1
Nonlinear Systems, Structure Variable Homotopy Methods for Solving, 59:177
Nonoscillation Criteria for Second-Order Nonlinear Differential Equations, 59:101
Nonparametric Estimation of the CDF of Weapon Effectiveness on Target Performance, 57:289
Norm Estimates of Product Operators with Application to Domain Decomposition, 53:251
Numerical Analysis of an Unsteady Confined Supersonic Jet., 57:245
Numerical Multistep Matrix Methods for $Y'' = f(t, Y)$, 59:257

ODEs, Autonomous Higher Order, Existence of h^2 Expansion for Some Extrapolation Methods for Solving, 58:69
ODEs, First-Order, A Runge-Kutta Method with Stepsize Control for Separated Systems for, 59:193
Oligopolies, Discrete Dynamic, On the Controllability of, under Adaptive Expectations, 56:49
Optics, Nonlinear, An Inverse Problem in, 56:59
ORESTE, Assignment of Available Products to Orders with, 54:183
Orthonormal Basis Sets, A Technique for Developing, Using General Solutions of Bessel's Differential Equation, 55:255
Oscillation Criteria for Second-Order Nonlinear Differential Equations, 59:101
Oscillation of Hyperbolic Equations with Functional Arguments, 53:97
Oscillations within Oscillations, 53:45
Ostrowski Root-Finding Method, Generalized, 57:275

Parabolic Integrodifferential Equation with a Weakly Singular Kernel, On the Discretization of, I: Smooth Initial Data, 58:1
II. Nonsmooth Initial Data, 58:29
Parabolic Partial Differential Equations, Non-Smooth Initial Data Error Estimates with the Weight Norms for the Linear Finite Element Method of, 54:1
Parabolic Systems with Competitive Interactions and Control on Initial Conditions, 59:215
Parallel Projection Method, Weak and Norm Convergence of, in Hilbert Spaces, 56:35
Patching Techniques, Spectral Multigrid Methods for Domain Decomposition Problems Using, 59:165
Perturbation Problems, Singular, A Computational Method for Solving, 55:31
Physics, Chaotic Solitons and the Foundations of: A Potential Revolution, 56:289
Polynomial Approximation, Probability Measures, Appel Polynomials and, 53:277
Polynomial Preconditioning on Vector Computers, 59:131
Probability Distributions, Natural Exponential Families of, and Exponential-Polynomial Approximation, 59:275
Probability Measures, Appel Polynomials and Polynomial Approximation, 53:277

Q-Markov Covariance Equivalent Realization, A New Formulation of, 53:83
Quality Analysis of the Food Industry, A Biattribute, 58:199
Quasiconcave/Quasiconvex Utility Functions, An Interative Integrated Multiobjective Optimization Approach for, 54:241
Quasi-Three-Dimensional Turbomachinery Cascades, Inverse Calculation Technique for, 57:197

Randles-Sevcik Function from Electrochemistry, A Note on, 57:305
Random Polynomials, Numerical Treatment of, 55:13
Reaction-Convection-Diffusion Equation, Ap-

plication of the Decomposition Method to the Solution of, 56:1
Recursive Specifications, On the Naturality of the Iteration and, 57:1
Reductionism, Rules, Laws, and, 56:341
Reliability-Based Tradeoffs, Bicriterion Operation of a Water Resources System with, 54:197
Ridge-Type Estimation Methods, Sensitivity of, to Observation Accuracy and Sampling Rate, 57:233
Riemann-Green Function and the Invariant Imbedding Equations for Hyperbolic Systems of First Order, 55:101
Robust Estimation and Testing for General Nonlinear Regression Models, 58:85
Root-Finding Method, Generalized Ostrowski, 57:275
Routing with Nonlinear Multiattribute Cost Functions, 54:215
Rules, Laws, and Reductionism, 56:341
Runge-Kutta Method, A, with Stepsize Control for Separated Systems for First-Order ODEs, 59:193

S-System Methodology, Finding Multiple Roots of Nonlinear Algebraic Equations Using, 55:187
Schroeder-Phased Multisinusoidal Input Design, Statistical Plant Set Estimation Using, 58:169
Second- and Third-Order Boundary Value Problems, Remarks on the Lower and Upper Solutions Method, Erratum, 56:101
Second-Order Matrix Differential Equations with Regular Singular Points, Solving, Avoiding Increase of Problem Dimension, 53:191
Singular Integro-Differential Equation, Computationally Efficient Method for the Solution of a, 57:161
Singular Perturbation Problem, Computational Method for a, via Domain Decomposition and Its Parallel Implementation, 56:71
Sloan Iterate, The Discrete, for the Generalized Airfoil Equation, 57:103
Solitons, Chaotic, and the Foundations of Physics: A Potential Revolution, 56:289
Spectral Multigrid Methods for Domain Decomposition Problems Using Patching Techniques, 59:165
Spectral Multigrid Methods, Finite Element Preconditioning for, 59:19
Spherical Shells with Fixed Circular Cutout, Shallow, On Axisymmetric Vibration of, 57:205
Statistical Inference Procedure for a Hypergeometric Model for Capture–Recapture Experiments, 58:225
Statistical Plant Set Estimation Using Schroeder-Phased Multisinusoidal Input Design, 58:169
Statistics, A Priori, Optimal Weighting of, in Linear Estimation Theory, 57:221
Stratified Sampling, Asymptotic Properties of (r, s)-Directed Divergences in a, 55:131
Strings; Chaos, Order, and Information in the Evolution of, 56:131
Strings, N-Bit, with Maximum Complexity, Note on the Number of, 59:97
Supersonic Jet, Unsteady Confined, Numerical Analysis of an, 57:245
Support Prices for a Discrete Time Growth Model with Uncertainty, Existence of, 53:27
Surface Grid Generation in the Tangent Plane, 59:41

Tangent Plane, Surface Grid Generation in, 59:41
Time Growth Model with Uncertainty, Discrete, Existence of Support Prices for, 53:27

Variance and Bias Reduction Techniques of the Harmonic Gradient Estimator, 55:153
Vector Computers, Polynomial Preconditioning on, 59:131
Vibration, Axisymmetric, of Shallow Spherical Shells with Fixed Circular Cutout, 57:205
Volterra Integrodifferential Equations of the First Kind, Higher Order Methods for Solving, 57:97
Von Neumann's Conjecture on Convergence of Averages, Answering, and Analyzing the von Neumann-Richtmyer Scheme via a Material Averaging Method, 55:265
Von Neumann-Richtmyer Scheme, Analyzing, Answering von Neumann's Conjecture on Convergence of Averages and, via a Material Averaging Method, 55:265

World Population Distribution: Smoothed Representations, 53:207
